

Assignment

Develop a spring boot application where you have to create RESTful web services for Product and category

Attributes of given execution are given below:

category (id, name, description , image_url , is_active) product (id, name , brand , description , unit_price , quantity , is_active , category_id , purchases ,views)

APIs For product -----

- Retrieve All Product (GET/Product)
- create Product (POST/Product)
- retrieve single Product (GET/Product/{id})
- Update Product (DELETE/Product/{id})
- Delete Product (DELETE/Product/{id})
- Delete product By Category (DELETE/Product/{categoryId})
- List of recent Active product By Category(GET/Product/{categoryId})

APIs for Category

- Retrieve All Category (GET/Category)
- create Category (POST/Category)
- Update Category (DELETE/Category/{id})
- Delete Category (DELETE/Category/{id})

-Multiple Delete Category using POST
